

The INPERSO project will deliver inclusive, affordable, efficient, and sustainable renovation which will be adaptable to various climate zones and building typologies but focused on residential and heritage buildings.

INPERSO will address the rapid deployment of solutions at a significant scale, that present replication and transferability potential while also adapting to current climate changes. The INPERSO completed system will be demonstrated and completed to deliver a near-market solution.

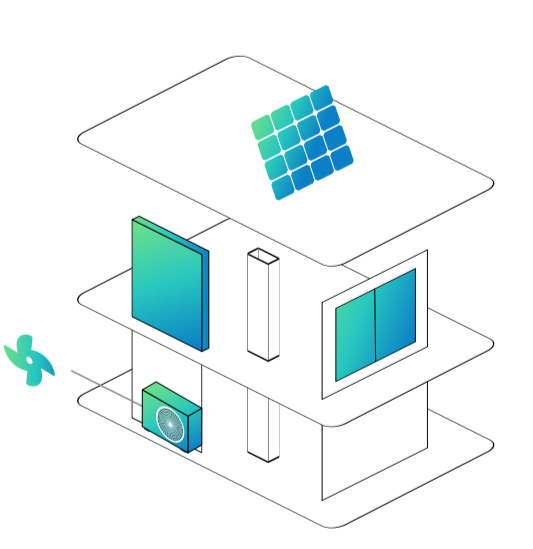

# INDustrialised and PErsonalised Renovation for Sustainable sOcieties

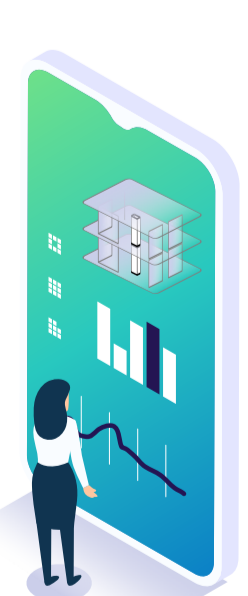

AI and AR-based solutions in RE SUITE platform

Low-Carbon Renovation Models

The Energy & Comfort Optimisation Interface
